- 3.Dividend mechanism
- 4.Guard pool
- 5.Burning destruction mechanism
- 6.Casino games

About Binance8

B8 (Binance8) is the basic token in the casino gaming ecosystem. It will be used as chip tokens for various games in the casino, abandoning the original coin chips and adopting the blockchain, it will be more interesting!

B8, this is a community-driven, game-driven, and NFT-driven project built on the Binance Smart Chain.

Token distribution

Symbol: B8

Total circulation: 52,000,000

Pre-sale & liquidity: 86.8%

Team Wallet: 8%

Binance official: 2.8%

Burning damage: 2.2%

Airdrop reward: 0.2%

Dividend mechanism

For each B8 transaction, the buying fee is 13%, and the selling transfer fee is 13%, of which 6% is used in the dividend pool and 6% is used in the guard pool. Dividends will be distributed to all holders of B8. According to the shareholding ratio, dividends will be distributed every 30 minutes, up to 8 times a day. The type of dividend is BUSD.

In other words, even if you do nothing, the value of your book BUSD will automatically increase with the long-term holding. The purpose of the static bonus reward mechanism is to solve the challenges that the B8 community may face after long-term development. The number of rewarded tokens largely depends on the thickness of the liquidity pool, which will encourage existing currency holders to continue holding instead of selling to enjoy the accumulation of daily dividends.

According to the token economy we have established, holding the coin for 20-30 days will receive a BUSD dividend of the principal value

Guard pool

6% of the buying and selling slippage will enter the guarding pool. When the price drops by more than 20%, the guarding pool will automatically buy the guarding. This will be a fast-developing mechanism.

This advanced transaction fee mechanism and our 30-minute automatic dividend mechanism stimulate existing holders to maintain confidence.

Burning destruction mechanism

6% of the handling fee will enter the guard pool and be kept by the guard robot. When the 24-hour decline is greater than or equal to 20%, the buying order is automatically guarded. After the end, the team will manually destroy the purchased B8 tokens. And published the burned hash value on the telegram

In the case of constant and super dividend BUSD, with the combustion of B8, the gradual deflation will be completed, which will become less and

less. If the protection mechanism is not triggered for a long time, this will be a perfect B8 mechanism, and the funds in the protection pool will become larger and larger. The team will regularly buy and destroy

Casino games

There are many types of casino games. You can use B8 to bet and earn more B8 or BTC, ETH, etc. We plan to add a mechanism to destroy B8 in the game, such as the ticket cost of each game as a destruction, or you 10% earned in a game is used for destruction

The game platform supports access to other games. We will open access to the documentation. You only need to use the API provided by us and have the skills to develop games to easily access our platform.
